

Lockheed Martin Atlas Program Purchases Two Additional Licenses of PSI from Etrage LLC for to support ProductView Model Visualization

Waltham, MA – August 5, 2005 – Etrage LLC, The Engineering Automation Company, today announced that Lockheed Martin Atlas Program has purchased two additional licenses of PSI – Plot Service for Pro/INTRALINK® to support the visualization requirements of the program.

“The additional licenses of PSI will be used to support our visualization requirements for Pro/ENGINEER models.” stated Richard Lawson, Senior Design Engineer. “Etrage has worked with Lockheed Martin to develop techniques to automatically produce ProductView files of the large Pro/ENGINEER rocket assemblies. Several of these assemblies approach a size of 8 Gigabytes.” Dennis Hoff, Manager of Atlas Engineering Services continues, “Previously production of the entire ProductView model for visualization was a manual effort. Now PSI can be used to automatically create a ProductView baseline of the rocket assembly over night.

PSI provides designers, engineers and administrators an automatic means of plotting or exporting Pro/INTRALINK objects to communication file formats such as PDF, ProductView, IGES, DXF, HPGL, image and native Pro/ENGINEER files. PSI has four operating modes for creating plots or files. They are through Web Access, Batch, Command Line or Automatic Monitoring of Pro/INTRALINK for objects promoted to an approved release level.

“We were able to enhance PSI to assist the Atlas Program create ProductView files from very large Pro/ENGINEER assemblies.” said Bojan Rapaic, founder and president of Etrage LLC. “At the same time PSI automates and makes the visualization process easier.” Ron Zabilski, director of sales and marketing continued, “The enhancements to PSI will enable Lockheed Martin Astronautics to automatically process approximately 30,000 parts and assemblies per rocket configuration for their visualization application. They also plan to refresh these models on a weekly basis and automatically update the assembly as parts are changed or released.”
